

LIMITATIONS Of Infrared Thermometer

LIMITATIONS OF INFRARED THERMOMETER:

- We believe that there is a **high risk** in checking multiple people with infrared thermometer as **the person who is checking them needs to stand close to them.**
- There is a maximum possibility that the person who is checking with the thermometer may get infected and may **infect other people whom he will be checking.**
- In order to keep our community safe and protected we suggest companies / industries / factories where number of people are more to optimise **Indoor Human Body Temperature Monitoring Infrared Thermal System.**
